PURPOSE OF MOVIE MARKET ANALYSIS

The entertainment industry is increasingly focused on original video content, prompting established companies to invest in film production to engage audiences and diversify revenue. A company plans to launch a new movie studio but lacks experience in production and distribution. Given the high upfront costs and risks associated with filmmaking, a data-driven approach is crucial for understanding market preferences and minimizing financial failures.

BUSINESS OBJECTIVES

1. To understand release window of the movies and what quarter of the year has highest ratings and revenue.
2. To identify top genres with best rates.
3. To understand if there is a relationship between movie run-time and the ratings, and the general run-time of most movies.
4. To see whether movies earn more revenue domestically or internationally.
5. To identify top performing production studios in terms of revenue.

KEY QUESTIONS

- When is the best time to release movies?
- What genres are associated with high ratings?
- Is there a relationship between run time and movie ratings?
- Which is the best performing market?
- What is the best production studio?

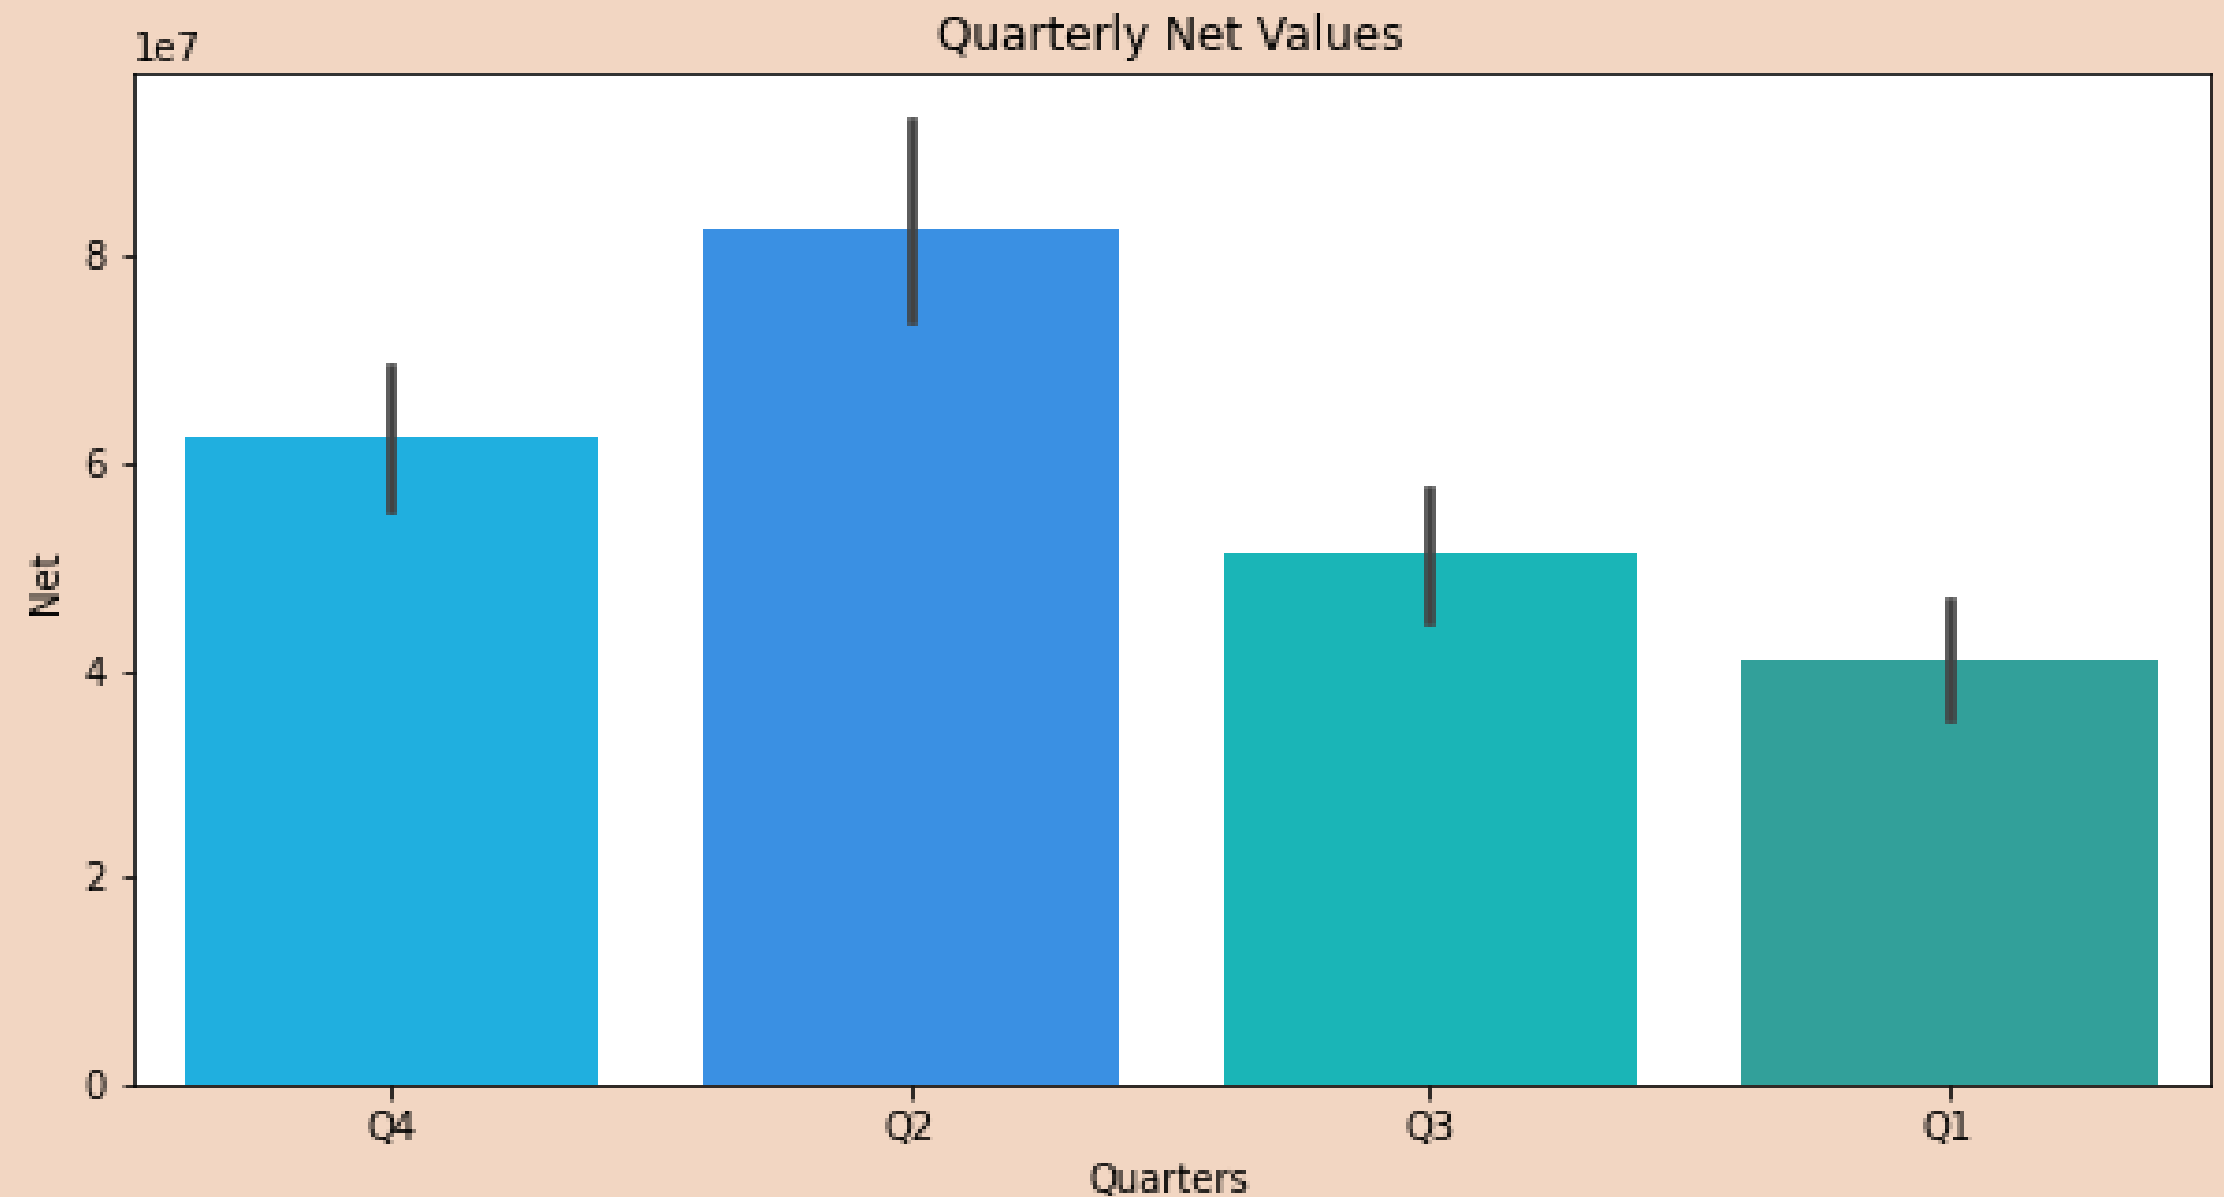

DATA SOURCES

- IMDB dataset
- The numbers dataset
- The box office mojo dataset

ANALYSIS

1. QUARTERLY NET VALUES

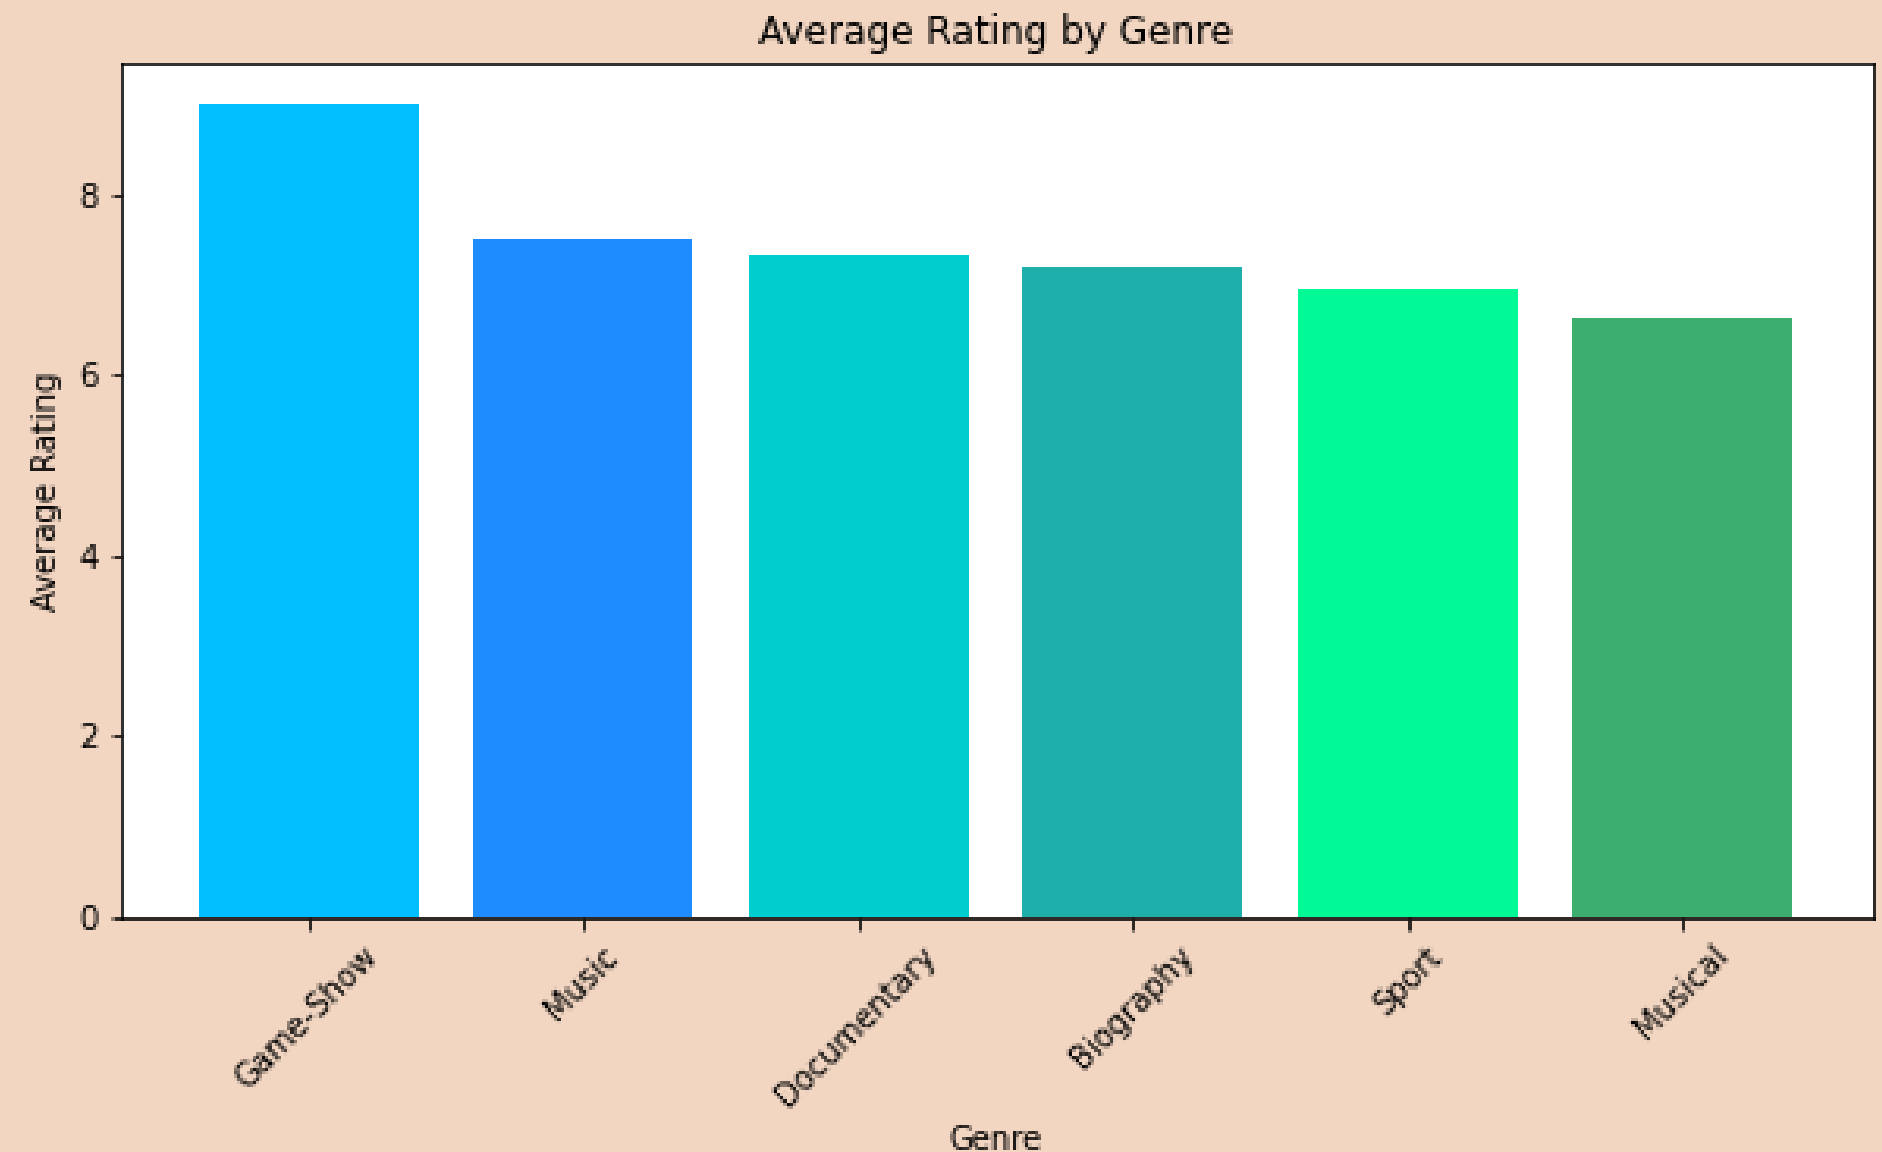

The quarterly analysis indicates Q2 (April–June) as the most profitable period for the company, surpassing other quarters in average net value. Q4 also performs well, while Q1 and Q3 show lower average profits. For the new studio, prioritizing resource allocation for Q2 launches is recommended to maximize financial returns.

2. TOP PERFORMING MOVIE GENRES BY AVERAGE RATING

The bar chart visual indicates that Game-Show, Music, and Documentary are the top-rated genres, with Game-Show leading at an average rating of 9.0, while the others range from 6.6 to 7.5.

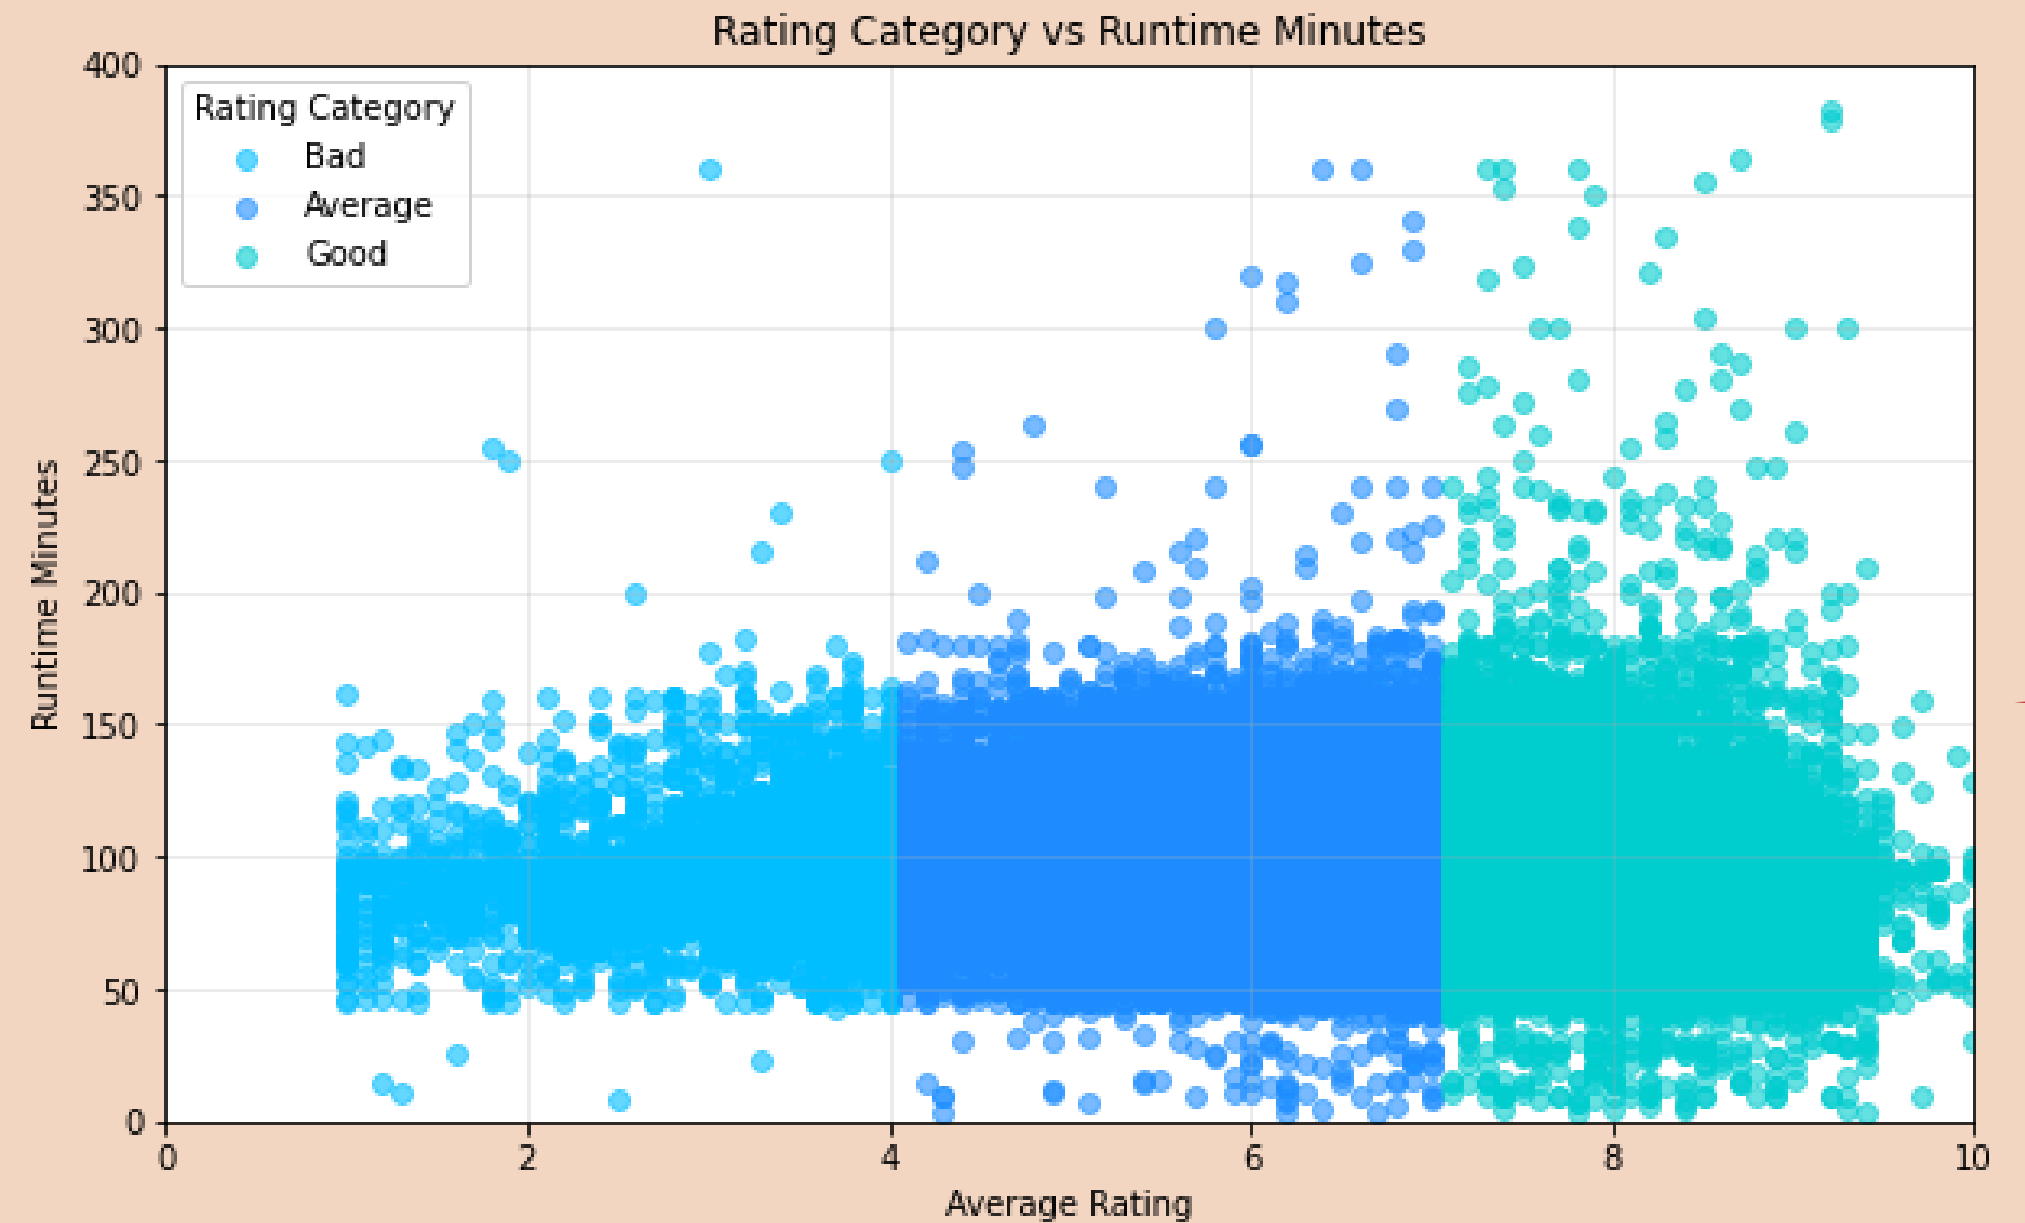

Although Drama is the most produced genre, focusing on these higher-rated categories could enhance critical reception and build a loyal audience.

1.

3. RATING CATEGORY VS RUN TIME MINUTES

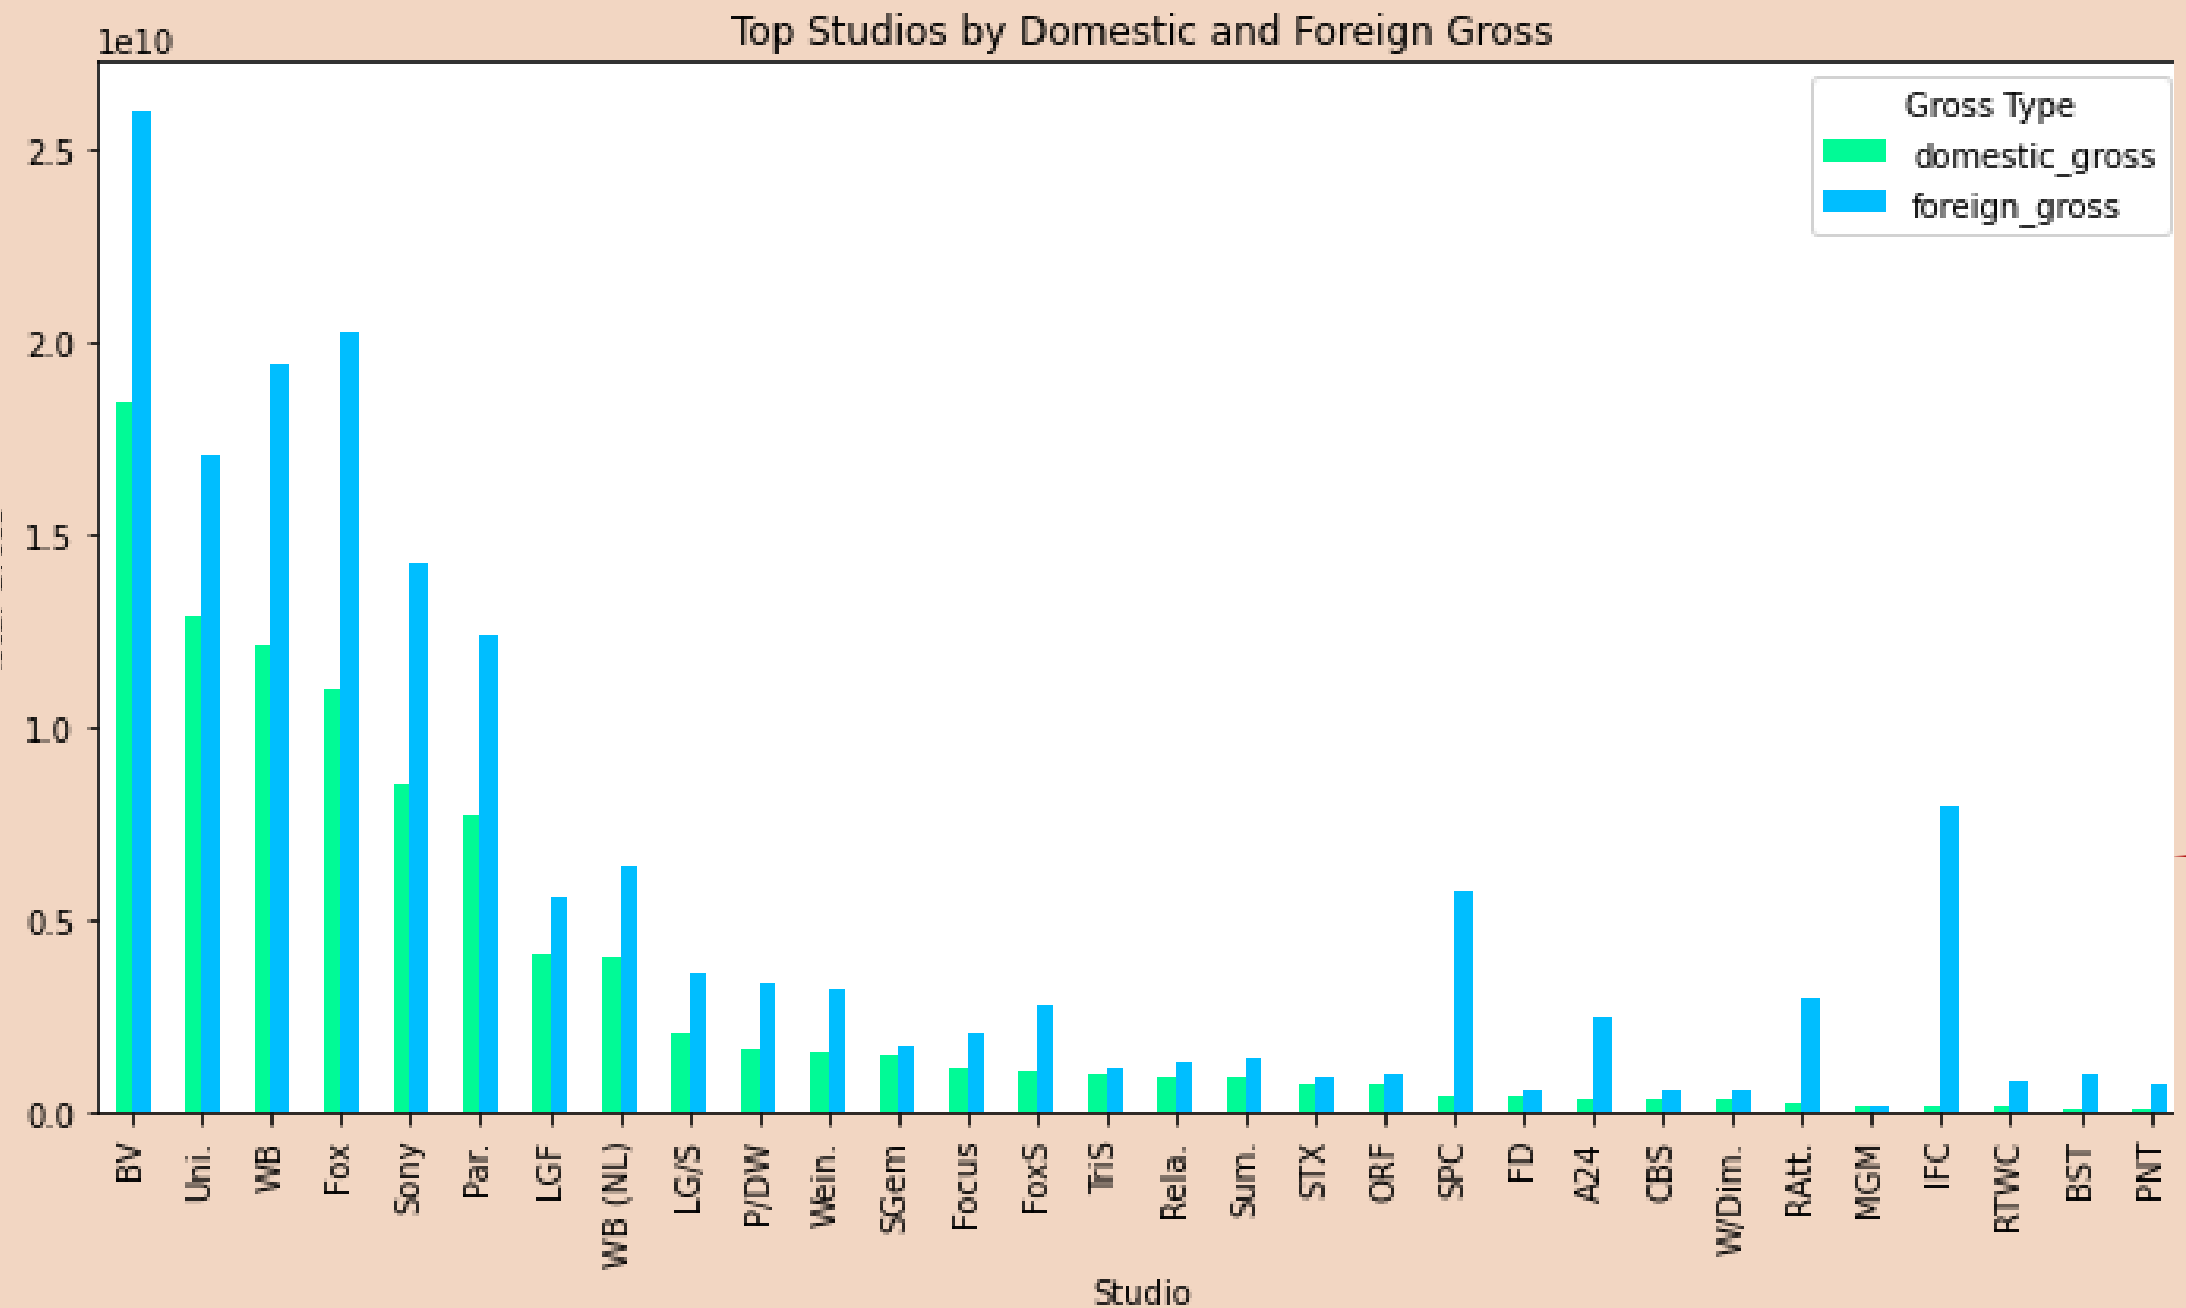

Analysis shows that movie runtime does affect the movie rating but not as much. The relationship is weak. However, it is preferable to have a movie runtime of between 80 and 100 minutes. This range proves significant since the mean of runtime minutes is 95 and this falls in the range(80-100).

1.

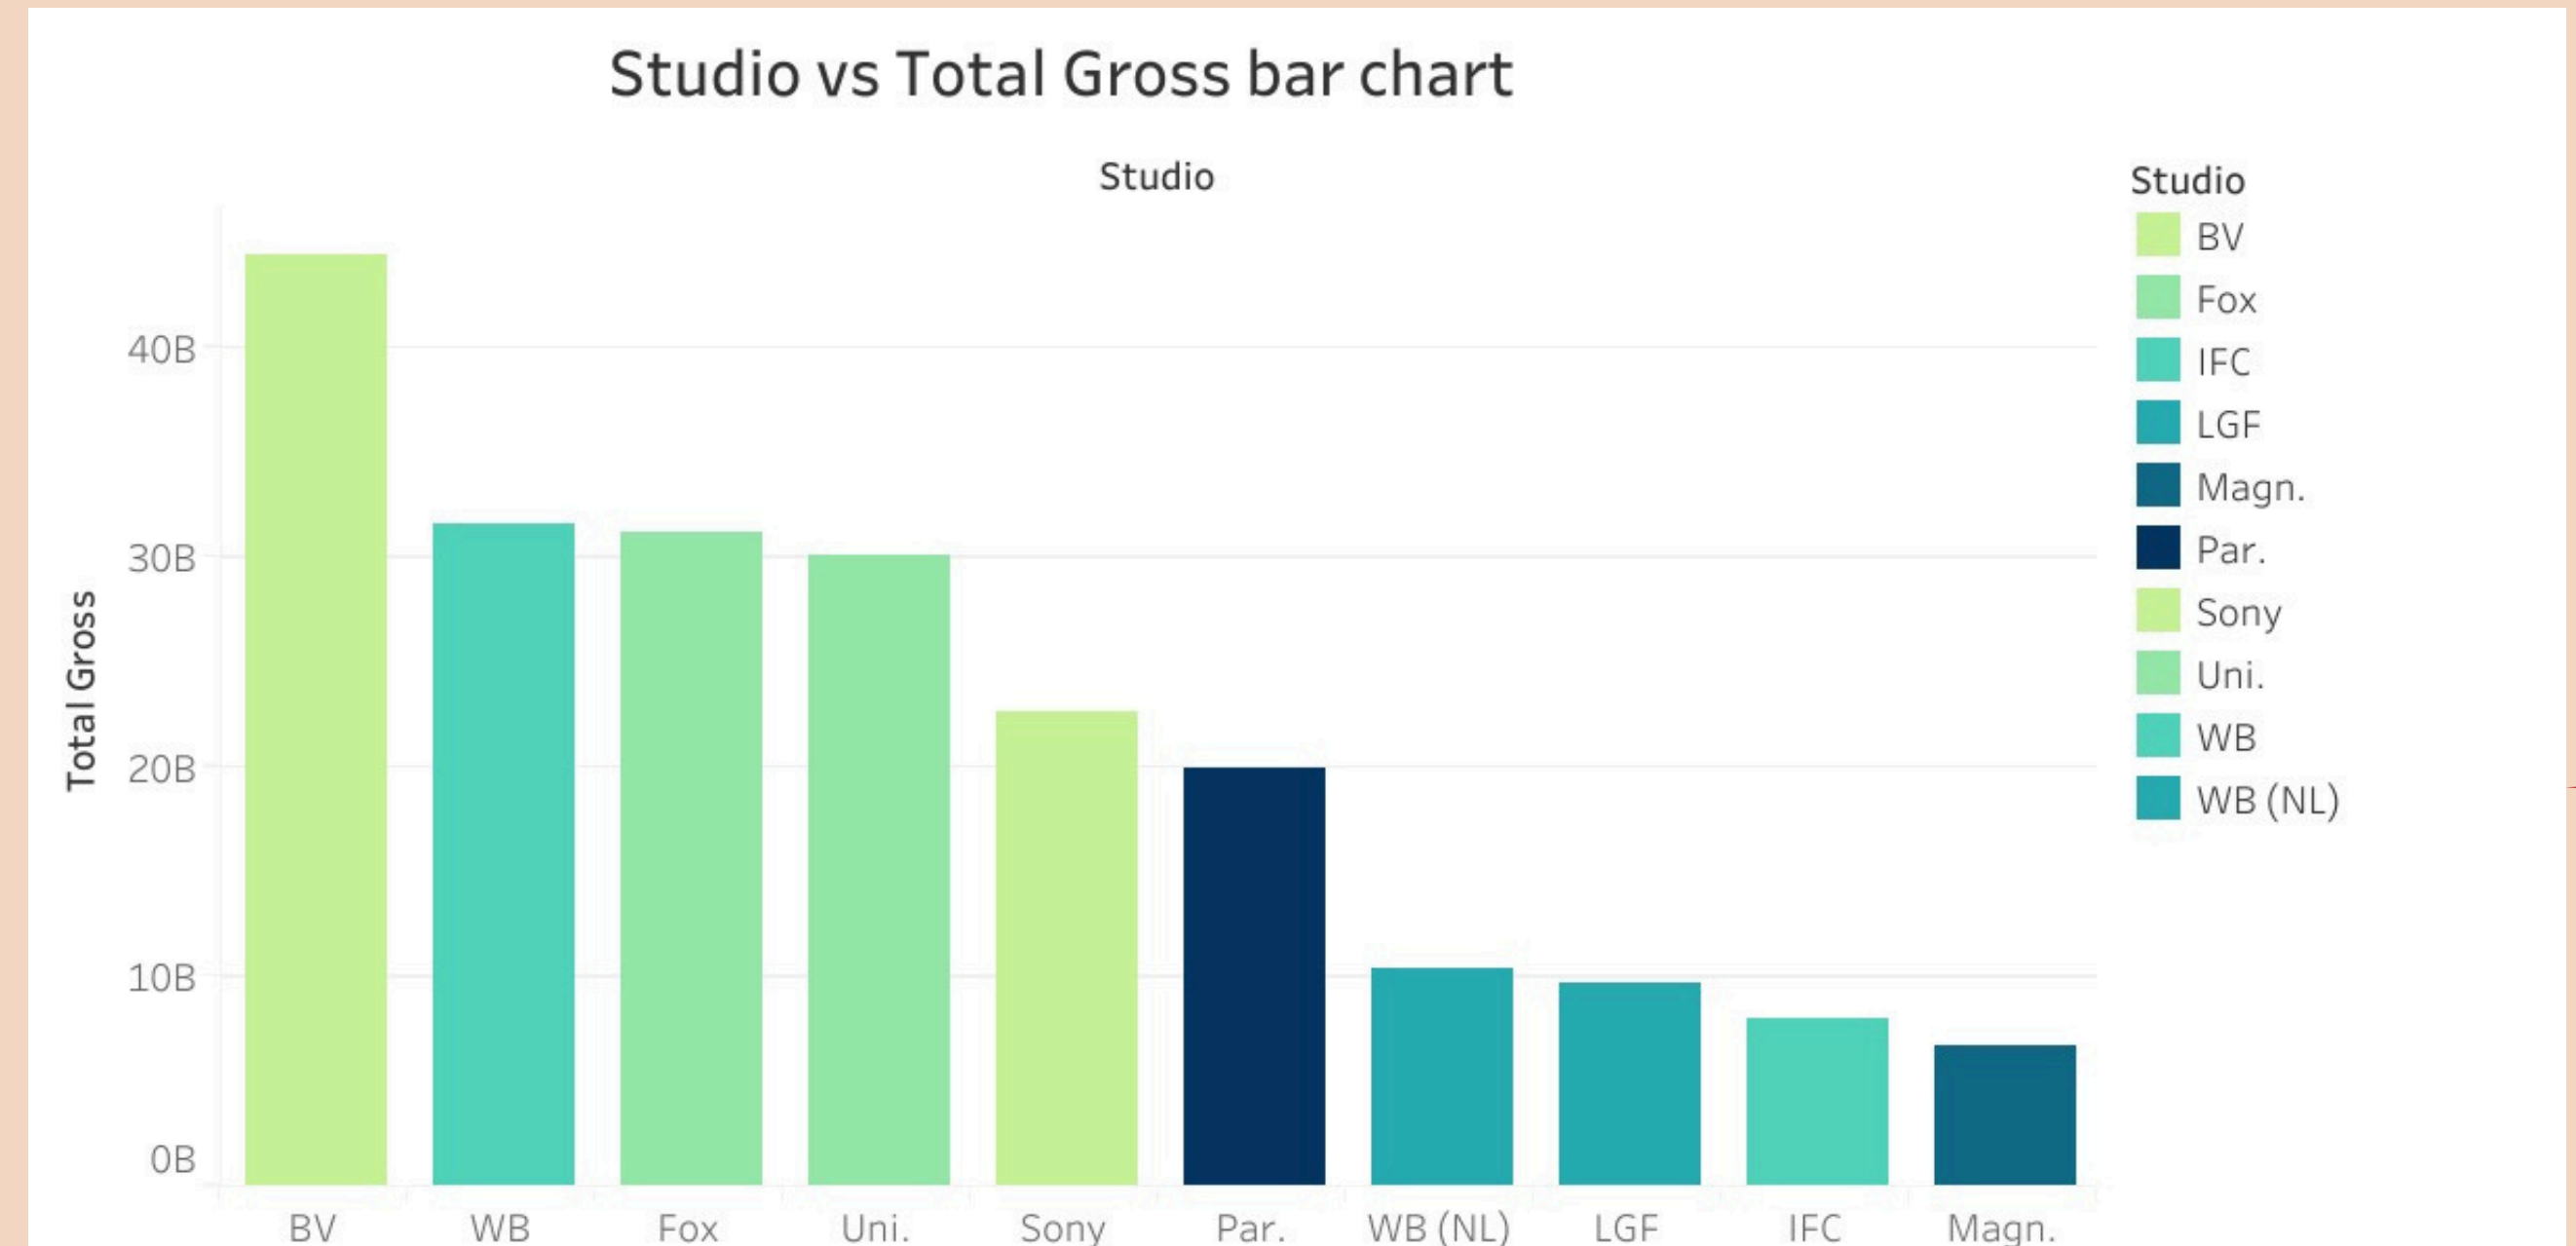

4. FOREIGN VS DOMESTIC MARKETS

From the visual, we can see that the foreign gross often exceeds the domestic gross. Both markets have outliers, but the international market has a high baseline of success in films compared to the domestic market.

5. TOP STUDIOS BY TOTAL GROSS

From the visual, BV studio has the highest total gross followed by WB, Fox then Uni. Which means that they are the top performing studios in terms of production.

CONCLUSIONS

- The second quarter of the year (April to June) is identified as the most profitable period for the company.
- The top-performing genre is Gameshow, boasting an impressive rating of 9.0.
- Most films typically run between 80 and 100 minutes.
- The international market stands out as the most lucrative, producing a great deal of profit.
- BV is recognized as the leading production studio in terms of revenue.

RECOMMENDATIONS

1. Prioritize Q2 as the best release window

The best period to produce movies is the second quarter of the year. This season has the highest average ratings, and during this season, there is a higher return on investments. This season is not saturated hence movie released will be easily noticed and viewed.

2. Prioritize Genres with high ratings

Gameshow is the top rated genre, followed by Music genre, then Documentary genre, then Biography, then Sport. the ratings are 9.0, 7.5, 7.3, 7.1 and 6.9 respectively. These should be considered as the top 5 genres to be produced by the company.

3. Prioritize producing movies with a duration between 80 and 100 minutes

the analysis shows that movie runtime does affect the movie rating but not as much. The relationship is weak. However, it is preferable to have a movie runtime of between 80 and 100 minutes. This range proves significant since the mean of runtime minutes is 95 and this falls in the range(80-100).

4. Prioritize International markets

From the analysis, we can see that the foreign gross often exceeds the domestic gross. Both markets have outliers, but the international market has a high baseline of success in films compared to the domestic market.

5. Prioritize best performing production studios

From the analysis, BV studio has the highest total gross followed by WB, Fox then Uni. Which means that they are the top performing studios in terms of production and should be considered.
